---

## PROJECTS

### BARTER | Trading & Advertisement Platform | Javascript, EJS, MongoDB, Render, Bootstrap

May 2024

- In a team of five, developed a trading app that does not use currency.
- Hosted images with Cloudinary, and databases on MongoDB

### Mindful Minute | Mood Tracker | Javascript, Firebase, Figma

April 2024

- In a team of three, built a journal and mood tracking app with annual, monthly, and weekly stats.
- Planned in Figma and used version control in GitHub.

### BeanTracker | TV & Movie Tracker | React, Tailwind CSS, Next.js, MongoDB, Cloudflare, Tailscale

August 2024

- Personal solo project developed over the summer, to aid in logging tv & movie shows.
- Self-hosted on personal server running on Termux, through Cloudflare tunnels and Tailscale VPN.  
<https://beantrack.vincef.xyz/>  
username: demo password: demo
- Uses TVMaze API for tv shows, and oMDB API for movies.

### Mayhem | Godot Fire Jam - 3<sup>rd</sup> Place | Godot, Git, Photoshop

September 2021

- A team of five developing a game in only a week, under the theme: “Everything Changes”.
- Helped create all the sound assets, and music.

### BeanBot | Discord & Twitch Bot | Typescript, MongoDB, Express, Twitch API, Discord API, Termux

October 2019

- Self-hosted Node.js app hosted on Termux. Made publicly available through Cloudflare tunnels and Tailscale VPN.
- Uses Twitch EventSub websocket, and Twitch’s static API.

### Yu-Gi-Oh | Card Matching Game | YgoProDeck API, Netlify, CSS, Javascript

October 2019

- Parsed data through the YgoProDeck API, to create cards.
  - Contains Javascript for board setup and card matching logic.
- 

## EXPERIENCE

### Animator

Vancouver, BC

BAM Canada (Non-profit Organization), Volunteer

Feb 2019 – Aug 2019

- Worked with the marketing team to plan out a 2D Animated short for their company’s website landing page to aid in promoting their brand.
- Attended weekly meetings through Zoom, to discuss changes for the following week.
